Researchers have determined the frequencies of many animals, vegetables & minerals, even heavy metals, toxins & parasites. By dialing into our *Radionics equipment the known frequency of say, mercury, we can then test and see if that same frequency is present in YOUR detox pads! The higher the number, the higher the presence of that substance in your pad! These numbers are NOT percentages! Same tests work for hair samples, even a photo of YOU - which can be retested later.

What is the value of testing a picture?

Since most of us are using the pouches/pads to detox or remove blockages that may be keeping our body from working as well as possible, testing the pads will let you know what your body is releasing into the pads that night.

Polaroid **pictures** have both the positive & negative of your energy field & hold the frequencies within your body. That is why Native Americans thought when a picture was taken you captured part of their soul... the picture HOLDS your vibration, and can be used to test your detox progress **initially** and 3-6 mos. **later** to see what's changed.

Have you been exposed to any specific toxic materials? List any you know of: _____, _____, _____, _____, _____.
